                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δÃ
                                                                                                     Query Match
                                                                             Matches
                                                                                                                                                 The present polynucleotide encodes a polypeptide which is expressed in mammalian skin cells. The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cells, modulating angiogenesis, inhibiting angiogenesis and vascularisation of tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency virus (HIV)-1 to leukocytes, and treating inflammatory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of oligonucleotides for examining expression patterns.
                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide used in the identification disorders and encoding polypeptides used for treating i disease, cancer and neurological diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rat; skin cell; cytostatic; antiinflammatory; anti-HIV; nootropic; neuroprotective; vulnerary; immunomodulatory

New polynucleotides and polypeptides encoded by the polynucleotides isolated from skin cells, useful for treating skin wounds, cancers, growth and developmental defects, inflammatory diseases, or for modulating immune responses

2002-122020/16

Claim 1; Page 262; 466pp; English.

The present invention provides the protein and coding sequences of cDNAs isolated from human, murine and rat skin cell libraries. The sequences can be used in the development of therapeutic agents useful in the treatment of skin diseases, including skin wounds, cancer, growth defects, developmental defects and inflammatory diseases. The proteins have important roles in the induction of hair growth, cell proliferation and cell-cell interaction, in maintaining tissue integrity, in wound have important modulating immune responses. The present sequence is a invention

dermal papilla, human keratinocytes and neonatal foreskin fibroblasts, cc and mouse embryonic skin, keratinocyte stem cells and transit amplifying cc cells. Polypeptides of the invention may be used to treat inflammation, cc cancer and neurological diseases. The proteins may be used to stimulate cc the growth and motility of keratinocytes, to inhibit the growth of cc cancer cells, to modulate angiogenesis and tumour vascularisation, to codulate skin inflammation, to modulate epithelial cell growth and to cc inhibit binding of HIV-1 to leukocytes. The invention may also be used cc inhibit binding of HIV-1 to leukocytes. The invention may also be used cc disorders. Sequences AAZ61606-Z61832 represent cDNA sequences derived cc from several mouse, rat or human skin cell types. Sequences Cc AAZ61606-Z61649, AAZ61725-Z61765, AAZ61802-Z61811 and AAZ61826 encode cc proteins with an N-terminal signal sequence, indicating that the proteins can daAZ61827-Z61839 encode proteins with one or more putative Novel polynucleotides useful for including wounds and cancer -Claim 1; Page relates 235pp; to novel nucleic acid sequences derived from rat keratinocytes and neonatal foreskin fibroblasts English. the treatment of various conditions

Sequence 1123 BP; 277 A; 266 C; 321 G; 258 T; 1 other;

The invention relates to novel nucleic acid sequences derived from rat dermal papilla, human keratinocytes and neonatal foreskin fibroblasts, and mouse embryonic skin, keratinocyte stem cells and transit amplifyin cells. Polypeptides of the invention may be used to treat inflammation, cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
